

## **Intel-Grid Publications**

The applications in Intel-Grid Publications are theoretical physics and the means of the structure of the Universe in ways that oppose to an extent the difference in nuclear and quantum analogy.

In time and space the fabrications of matter and mass, substance, energy/ force/ momentum. The reason for this is the compilation of the structure of the Universe.

As it all came to be, the insight of The Quantum Grid Theory opens up to the probability that there might have been oversight in nuclear physics into the aspect of Quantum Physics.
